<b>2</b>	<b>Foundational Topics .....</b>	<b>9</b>
2.1	Element Naming in GDSN .....	9
2.2	Cardinality Terminology for Attributes .....	9
2.3	Code Lists .....	9
2.4	GS1 Attribute Definitions for Business .....	10
2.5	Global Data Dictionary .....	11
<b>3</b>	<b>Sharing Vital Attributes for Healthcare .....</b>	<b>12</b>
3.1	Attributes for Product Validation .....	13
3.1.1	GTIN (gtin) .....	13
3.1.2	Brand Name (brandName) .....	13
3.1.3	Product Description (tradeItemDescription and additionalTradeItemDescription) .....	13
3.1.4	Global Product Category (gpcCategoryCode) .....	16
3.1.5	Net Content and Unit of Measure (netContent and CodeListTransactionalMeasurementUnitCode) .....	17
3.1.6	Target Market/Country of Sale (targetMarketCountryCode) .....	19
3.2	Attributes for Procurement & Payment .....	20
3.2.1	Unit Descriptor (TradeItemUnitDescriptorCode) .....	20
3.2.2	Name of Information Provider (partyName [info provider]) .....	21
3.2.3	Global Location Number of Information Provider (gln [info provider]) .....	21
3.2.4	Orderable Unit Indicator (isTradeItemAnOrderableUnit) .....	21
3.2.5	Base Unit Indicator (isTradeItemABaseUnit) .....	21
3.2.6	Additional Product Identification Code (AdditionalTradeItemIdentificationTypeCode) .....	21
3.2.7	Additional Product Identifier (additionalTradeItemIdentificationValue) .....	22
3.2.8	Manufacturer Name (party name [manufacturer name]) .....	22
3.2.9	Manufacturer GLN (gln [manufacturer]) .....	22
3.2.10	Functional Name (functionalName) .....	22
3.2.11	Number of Different Products (quantityOfChildren) .....	23
3.2.12	Total Count of All Products (totalQuantityOfNextLowerLevelTradeItem) .....	23
3.2.13	Child Trade Item (tradeItemIdentificationOfNextLowerLevelTradeItem [GTIN]) .....	23
3.2.14	Count of Each Specific Product (quantityOfNextLowerLevelTradeItem) .....	24
3.3	Attributes for EPCIS for Drug Supply Chain Security Act .....	26
3.3.1	Consumer Unit Indicator (isTradeItemAConsumerUnit) .....	26
3.3.2	Invoice Unit Indicator (isTradeItemAnInvoiceUnit) .....	26
3.3.3	Shipping Unit Indicator (isTradeItemA DespatchUnit) .....	26

3.3.4	Variable Measure Indicator (isTradeItemAVariableUnit)	26
3.3.5	Effective Date (effectiveDateTime)	27
3.3.6	End Availability Date Time (endAvailabilityDateTime)	27
3.3.7	Dosage Form Type (dosageFormType)	27
3.3.8	Ingredient Strength (ingredientStrength)	28
3.3.9	Data Carrier Type Code (DataCarrierTypeCode)	28
3.3.10	Serial Number Location (SerialNumberLocationCode)	28
3.3.11	Has Batch Number (hasBatchNumber)	29
3.3.12	Trade Item Date on Packaging Type Code (tradeItemDateOnPackagingTypeCode)	29
3.4	Attributes for Point of Care Scanning	37
3.4.1	Quantity of Inner pack (quantityOfInnerPack)	37
3.4.2	Quantity of Next Level Trade Item within Inner Pack (quantityOfNextLevelTradeItemWithinInnerPack)	37
3.5	Other Attributes Recommended for Healthcare	41
3.5.1	Depth and UOM (depth & MeasurementUnitCode_GDSN)	41
3.5.2	Height and UOM (height & MeasurementUnitCode_GDSN)	41
3.5.3	Width and UOM (width & MeasurementUnitCode_GDSN)	41
3.5.4	Gross Weight and UOM (gross weight & MeasurementUnitCode_GDSN)	42
3.5.5	Additional Classification Agency Name (additionalTradeItemClassificationSystemCode)	42
3.5.6	Additional Classification Category Code (additionalTradeItemClassificationCodeValue)	42
3.5.7	Packaging Type Code (packagingTypeCode)	42
3.5.8	Publication Date (publicationDateTime)	43
3.5.9	Established Name (regulatedProductName)	43
3.5.10	Start Availability Date Time (startAvailabilityDateTime)	43
3.5.11	Trade Item Status (GDSN Mandatory; a 'command' to be added by Data Pool)	43
3.6	Other Attributes Required for GUDID	48
<b>4</b>	<b>Additional Attribution Examples</b>	<b>49</b>

## About GS1

GS1® is a neutral, not-for-profit, global organization that develops and maintains the most widely used supply chain standards system in the world. GS1 Standards improve the efficiency, safety, and visibility of supply chains across multiple sectors. With local Member Organizations in over 110 countries, GS1 engages with communities of trading partners, industry organizations, governments, and technology providers to understand and respond to their business needs through the adoption and implementation of global standards. GS1 is driven by over a million user companies, which execute more than six billion transactions daily in 150 countries using GS1 Standards.

## About GS1 US

GS1 US®, a member of GS1 global, is a not-for-profit information standards organization that facilitates industry collaboration to help improve supply chain visibility and efficiency through the use of GS1 Standards, the most widely used supply chain standards system in the world. Nearly 300,000 businesses in 25 industries rely on GS1 US for trading partner collaboration that optimizes their supply chains, drives cost performance and revenue growth, while also enabling regulatory compliance. They achieve these benefits through solutions based on GS1 global unique numbering and identification systems, barcodes, Electronic Product Code (EPC®)-based RFID, data synchronization, and electronic information exchange. GS1 US also manages the United Nations Standard Products and Services Code® (UNSPSC®).

## About GS1 Healthcare

GS1 Healthcare is a global, voluntary healthcare user group developing global standards for the healthcare supply chain and advancing global harmonization. GS1 Healthcare consists of participants from all stakeholders of the healthcare supply chain: manufacturers, wholesalers, and distributors, as well as hospitals and pharmacy retailers. GS1 Healthcare also maintains close contacts with regulatory agencies and trade organizations worldwide. GS1 Healthcare drives the development of GS1 Standards and solutions to meet the needs of the global healthcare industry and promotes the effective utilization and implementation of global standards in the healthcare industry through local support initiatives like GS1 Healthcare US® in the United States.

## About GS1 Healthcare US

GS1 Healthcare US® is an industry group that focuses on driving the adoption and implementation of GS1 Standards in the healthcare industry in the United States to help improve patient safety and supply chain efficiency. GS1 Healthcare US brings together members from all segments of the healthcare industry to address the supply chain issues that most impact healthcare in the United States. Facilitated by GS1 US, GS1 Healthcare US is one of over 30 local GS1 Healthcare user groups around the world that supports the adoption and implementation of global standards developed by GS1.

## About the Healthcare Supply Chain Association (HSCA)

The Healthcare Supply Chain Association (HSCA) represents the nation's leading healthcare group purchasing organizations (GPOs), which are critical cost-savings partners to America's hospitals, homes, nursing home pharmacies, clinics, home healthcare providers and surgery centers. GPOs deliver billions in savings annually to healthcare providers, Medicare and Medicaid, and taxpayers. HSCA and its member GPOs are committed to delivering the best products at the best value to healthcare providers.

## About the Committee for Healthcare eStandards (CHeS)

CHeS is working committee of HSCA and a leader in the healthcare industry's efforts to improve accuracy, efficiency, and patient safety through the application of electronic data standards in the healthcare supply chain. CHeS works across sectors to accelerate industry-wide deployment of the standards and associated processes throughout the healthcare supply chain.

## Document Summary

Document Item	Current Value
Document Title	Best Practice Guide for Sharing Vital Attributes in Healthcare
Date Last Modified	June 2021
Document Description	This document provides best practice guidance for healthcare industry members intending to share data about medical devices or pharmaceutical products.

# 1 Introduction

This document provides best practice guidance for healthcare industry members intending to share data about medical devices or pharmaceutical products. While these best practices are provided with some specificity to sharing data via the GS1 Global Data Synchronization Network™ (GDSN®), the intention was to outline best practices at the attribute level, irrespective of the sharing method. Healthcare stakeholders will likely continue to use a variety of sources for providing and obtaining information about the products they sell, buy, and use in the administration of patient care. Whether data is shared one to one via spreadsheets or text files or downloaded from the U.S. FDA Global Unique Device Identification Database (GUDID) or shared in a one to many tool like GDSN, the data found in these sources should be complete and consistent across all data sources and industry trading partners. GS1 worked closely with the Healthcare Supply Chain Association’s (HSCA) Committee for Healthcare eStandards and cross-industry members of the GS1 Healthcare US Industry Initiative Data Quality & Value of Trusted Data workgroup to develop this guidance and best practices document to support healthcare organizations in sharing vital attribute data that meets the definition of “trusted data” as defined in Figure 1.

In order to achieve interoperability in healthcare, the workgroup believes that the structure and content of data must be able to be readily synchronized, which requires all trading partners to be aligned on the format, structure, and content at the attribute level. These best practices are intended to enable more seamless data synchronization between healthcare trading partners in order to achieve that interoperability.

**Figure 1-1** Elements of Trusted Data

**Accurate**

- Data provided is aligned with how it is viewed or used by trading partners
- Data provided matches the label

**Complete**

- Data needed for different business processes or decision making means a variety of data elements are needed by trading partners

**Timely**

- Real time as much as possible; a lot of business takes place in 30 days

**Consistent**

- Multiple data sources used by trading partners need to have consistent core information

**Synchronized**

- Collaboration across trading partners is essential to achieve data needs

**Important:** As with all GS1 Standards and solutions, the *Best Practice Guide for Sharing Vital Attributes in Healthcare* is voluntary, not mandatory. It should be noted that use of the words “must” and “require” throughout this document relate exclusively to technical recommendations for the proper application of the standards to support the integrity of your implementation.

GS1 US is not offering legal services or advice on the Company’s regulatory compliance requirements. Each company is individually responsible for meeting all statutory and/or regulatory requirements for their company and their products. Consult with your company’s legal

counsel or compliance team for more specific information about statutory and regulatory requirements.

## 1.1 Document Purpose

The purpose of this document is to supplement the documents listed below by providing guidance to increase accuracy, completeness, and consistency of vital attributes needed to support basic healthcare processes. The belief is that, if all healthcare stakeholders, both data sources and data recipients, will support these recommended best practices at the attribute level, trading partners' ability to trust and seamlessly synchronize shared data will improve. Aligning at this level from end to end of the supply chain will promote data accuracy, efficiency, and interoperability.

## 1.2 Accompanying Documents

This document, *Best Practice Guide for Sharing Vital Attributes in Healthcare*, is the fourth in a series of Healthcare specific documents intended to support the community in providing high-quality and trusted data that is foundational to basic healthcare processes and transactions. The preceding documents listed here serve to lay a strong foundation for healthcare trading partners wishing to share data and considering GDSN as a primary data sharing method.

- [\*\*GS1 Healthcare US: Quick Start Guide for Implementing GDSN in Healthcare\*\*](#)

This document provides a brief overview of the steps and resources needed for a successful implementation of the GDSN for medical device and/or pharmaceutical products. This Quick Start Guide serves as a starting point to other GS1 Healthcare US GDSN documents.

- [\*\*Creating the Case for Trusted Data: Attribute Lists and Implementation Insights from Three Healthcare Business Process Cases Using GDSN\*\*](#)

The purpose of this document is to:

- Identify the GDSN attributes recommended to support three healthcare use cases
- Offer insight and guidance about key topics for GDSN implementation
- Recommend next steps to help drive implementation of the GDSN in U.S. healthcare to support their need for quality product information.

- [\*\*GS1 Healthcare US: Getting Started with GDSN\*\*](#)

This document provides a high-level resource to help healthcare organizations jumpstart their GDSN implementation efforts. The document outlines the key tasks that most companies will find necessary for a successful implementation, shares learnings, and explains the recommended processes established by other companies in their deployment of the GDSN.

Additionally, GS1 US recognizes that data quality depends on strong data governance practices. To that end, we believe that organizations wishing to share, consume, and use data should ensure that there are strong data governance fundamentals in place. The following resources are suggested to assist in the development of data management standard operating procedures and can be found on the GS1 US Website at: <https://www.gs1us.org/dataquality>

- [Data Governance Best Practice Guidance](#)
- [GS1 US National Data Quality Playbook](#)

### 1.3 Who Will Use this Document?

Both data sources and data recipients will benefit from using this document. Business users who are charged with master data management, procurement, regulatory compliance, and data governance may use this document. Additionally, it can serve to supplement the formal GS1 GDSN standards with additional guidance. IT resources within manufacturers, providers, and solution providers may use this information to support the sharing and/or consumption of data about healthcare products. This document is aimed primarily at business users who need to understand and execute on the data content.

### 1.4 Scope of this Document

The scope is the core data defined by the workgroup as the attributes needed to execute basic healthcare supply chain functions such as product identification, order to cash, and traceability as well as scanning at the point of care. This document may be updated as additional use cases or needs are identified.

Additionally, the workgroup felt that providing references for other required GUDID data elements would be beneficial to industry. To accommodate this, 11 data elements were added to the scope of this guidance document that were not part of the vital attributes business use cases exercises. You will find these additional data elements listed in Section 3.5.

## 2 Foundational Topics

### 2.1 Element Naming in GDSN

All **Module, Class, and Code List names** used in the GDSN Schema have no spaces, and all words in the name are capitalized. For example:

- TradeItemDescriptionModule
- AllergenInformation
- LevelOfContainmentCodeList

All **attribute names** used in the GDSN Schema have no spaces, and all words in the name are capitalized with the exception of the first word. For example:

- brandName
- tradeItemDescription

**Note:** See section 2.5 regarding Global Data Dictionary for accessing information about an attribute's definition, cardinality, and schema.

### 2.2 Cardinality Terminology for Attributes

For data synchronization, attributes have a characteristic which details if the attribute must be populated or not. This characteristic is called "cardinality." While the GDSN standards specify the baseline cardinality of the attributes overall, the GS1 Healthcare US Initiative has analyzed and supplemented the cardinality of attributes over and above that assigned by GDSN where appropriate for meeting the needs for the basic business use cases in scope for the healthcare industry. For example, the GDSN may specify an attribute as optional, but the Initiative may have determined that the attribute should be populated for a specific healthcare use case. This determination does not prescribe any need or eliminate the ability to require population of any attribute by a Data Recipient.

The cardinality of each attribute currently in scope in this document, with the exception of the attributes covered in Section 3.6 pertaining to GUDID, is listed in the [Creating the Case for Trusted Data: Attribute Lists and Implementation Insights from Three Healthcare Business Process Cases](#). Cardinality term definitions are provided below.

- **GDSN Mandatory:** Attribute must be populated in order to load and/or share data via GDSN
- **Required:** Attribute is required to support the business process
- **Required/Conditional:** Attribute is required to support the business process but only if it is applicable to the product
- **Recommended:** Attribute is helpful to trading partners in support of the business process

### 2.3 Code Lists

The GDSN utilizes GS1 defined code lists as well as externally managed code lists (e.g., FDA.gov, ISO, etc.). Code lists used in the GDSN may be managed outside of the schema due to both frequency of update and requirements that vary between target markets.

There are several externally managed code lists, which are used in several areas of the schema to provide code values. The table below lists some of the most frequently used managed code lists for healthcare attributes.

**Table 2-1** Managed Code Lists

Code List	Comments
GPC Code (global product category)	<p><a href="https://www.gs1.org/standards/gpc/access-gpc-standards">https://www.gs1.org/standards/gpc/access-gpc-standards</a></p> <p>The GS1 GPC is a system that gives buyers and sellers a common language for grouping products in the same way, everywhere in the world.</p>
ISO 3166-1 Country Code	<p><a href="https://www.iso.org/obp/ui/#search">https://www.iso.org/obp/ui/#search</a></p>
FDA Dosage Forms	<p><a href="https://www.fda.gov/industry/structured-product-labeling-resources/dosage-forms">https://www.fda.gov/industry/structured-product-labeling-resources/dosage-forms</a></p>
additionalClassificationCategoryCode	<p><a href="https://www.unspsc.org/">https://www.unspsc.org/</a></p>
<p>GDSN Code List Document</p> <ul style="list-style-type: none"> <li>▪ UoM (unit of measure), MeasurementUnitCode_GDSN</li> <li>▪ TradeItemUnitDescriptorCode</li> <li>▪ AdditionalTradeItemIdentificationTypeCode</li> <li>▪ DataCarrierTypeCode</li> <li>▪ SerialNumberLocationCode</li> <li>▪ TradeItemDateOnPackagingTypeCode</li> <li>▪ MeasurementUnitCode_GDSN</li> <li>▪ AdditionalTradeItemClassificationCodeListCode</li> <li>▪ PackageTypeCode</li> <li>▪ PackagingMarkedFreeFromCode</li> </ul>	<p><a href="https://www.gs1.org/standards/gdsn/current-standard">https://www.gs1.org/standards/gdsn/current-standard</a></p> <p>GS1 maintains a periodically updated spreadsheet known as the GDSN Code List Document which contains all of the GS1 code lists and their values. A specific code list and its values can be viewed by filtering on the Code List name in the first column.</p>

## 2.4 GS1 Attribute Definitions for Business

[The GS1 Attribute Definitions for Business \(ADB\)](#) provides additional clarity to existing technical standards. Business-friendly names, definitions, examples, and usage statements simplify meaning and usage of standard attributes for business users and communities.

## 2.5 Global Data Dictionary

[The GS1 Global Data Dictionary \(GDD\)](#) is a repository of the data elements defined across all GS1 Standards. Each vital attribute discussed herein is headed by its common name followed by the GDSN name in parentheses. For the technical specifications of each attribute, please refer to the Global Data Dictionary.

### 3 Sharing Vital Attributes for Healthcare

While conducting our business process exercises in the development of [Creating the Case for Trusted Data: Attribute Lists and Implementation Insights from Three Healthcare Business Process Cases](#) a vitally important and impactful learning from those exercises was that, even once stakeholders agreed on what attributes needed to be shared to facilitate basic business processes, stakeholders often lacked the infrastructure in people, process, and technology to support robust data sharing with their trading partners. Additionally, variability in the content and format of data shared about individual attributes leads to inconsistency and unreliability of information across industry.

In order to be successful in establishing a meaningful and sustainable data sharing environment, trading partners need to make appropriate investments in process development, technology, and systems as well as training and personnel to support master data management. The following areas of focus were identified in the aforementioned exercises:

- Master data management
- Attribute mapping and interfaces
- Systems preparedness and mapping
- Establishment of a data team
- Data quality and strong data governance processes
- Trading partner collaboration

Throughout the course of our previous workgroup activities, we also learned that very consistent lists of core attributes needed to support healthcare uses cases are and have been available to support industry for many years. The issue is that industry has not collectively embraced or leveraged these recommendations, and trading partners have inconsistent format requirements for the attributes they do attempt to share. In the sections that follow, the Data Quality & Value of Trusted Data workgroup seeks to clarify best practices for sharing information about the critical data elements previously identified for industry. These best practices, if embraced and employed by data sources and data recipients, will support the completeness, accuracy, and consistency characteristics of trusted data across all industry stakeholders.

 **Note:** To help users of this document better understand the best practice recommendations being made for each attribute, we will use several hypothetical examples of healthcare-related products. These examples are for illustrative purposes only and the accompanying attribute tables do not represent the only options for sharing data about healthcare products.

 **Note:** For clarification, the use of “GTIN A”, “GTIN B”, etc. in this document is intended to show that a unique GTIN is assigned at this packaging level for this specific product example. “GTIN A” or “GTIN B” are not indicative of the same GTIN *across* the illustrative examples.

 **Note:** In the attribute section headers below, we have noted the following: Common Name as defined in the [GS1 Global Data Model](#) and the GDSN attribute name in parentheses. With respect to cardinality, this is defined based on the recommendations as determined by industry and outlined in [Creating the Case for Trusted Data: Attribute Lists and Implementation Insights from Three Healthcare Business Process Cases](#) and is specific to these healthcare best practice recommendations only.

### 3.1 Attributes for Product Validation

At a minimum, trading partners will need to ensure that they are aligned on a specific product before sharing more robust information about that product. The following six attributes establish a solid foundation for sharing consistent data.

#### 3.1.1 GTIN (gtin)

**The global number that uniquely identifies a product and its various packaging levels (e.g. item, case, pallet) physical or non-physical; trade item identifier.**

- This field should contain the Global Trade Item Number (GTIN) in 14-digit format. A GTIN may be an 8-digit, 12-digit, 13-digit, or 14-digit string. However, the GTIN should always be stored in a database as a 14-digit number filled in with leading zeroes up to 14 digits. Additional information regarding GTIN formats may be found in the [GS1 Healthcare GTIN Allocation Rules Standard](#) and [GS1 General Specifications](#).

#### 3.1.2 Brand Name (brandName)

**The name provided by the brand owner that is intended to be recognized by the consumer as represented on the product.**

- GS1 Guidance: This should be the most recognizable brand on the package/trade item. If there is no brand on the package/trade item, this should be the brand name under which the item is sold.
- In the absence of a brand use 'unbranded', do not use the company name. In a combination package (ie kit) containing more than one brand, use "mixed". Either "unbranded" or "mixed" should be aliased/mapped to "N/A" in the GUDID Brand Name field.
- For pharmaceuticals, use the proprietary name.

#### 3.1.3 Product Description (tradeItemDescription and additionalTradeItemDescription)

**An understandable and useable description of a product using a combination of key elements necessary to communicate to the industry to help define the product.**

- Primary Supply chain (long) descriptions shared between trading partners should use the tradeItemDescription attribute and be 200 characters or less as many data recipient systems have a limited field length for description.
- Except for units of measure (UoM), abbreviations should not be used unless necessary to meet the field length recommendation and should, if used, follow recommended abbreviation guidelines. If the event abbreviation is required, a complete unabbreviated description should also be populated to the GDSN 'additionalTradeItemDescription' field. If abbreviation is not required, the value in tradeItemDescription should also be used to populate additionalTradeItemDescription. This will accommodate data recipients who utilize larger field lengths, such as the US FDA's GUDID. In any case, both tradeItemDescription and additionalTradeItemDescription should be populated by data publishers due to the variability in downstream recipient's field lengths. Data publishers should consult with their data pools on managing these descriptions.

- Punctuation should be limited to specified necessary special characters (mathematic/scientific).

**Table 3-1** Special Characters to Avoid

<p>Special characters can create data sharing and EDI issues</p> <p><u>Do not use</u></p>	&	Ampersand
	'	Apostrophe
	*	Asterisk
	@	At
	[ ]	Brackets
	:	Colon
	\$	Dollar
	{ }	Curly Brackets
	=	Equal Sign
	!	Exclamation Point
	^	Insert/Caret
	#	Number
	( )	Parenthesis
		Pipe
	?	Question Mark
	""	Quotes
	;	Semi-colon
	~	Tilde
_	Underscore	

- Use of mathematical and scientific characters, when necessary, is allowed.

**Table 3-2** Mathematical and Scientific Characters

<b>Mathematical and scientific characters</b> <u>Only use when necessary</u>	.	Decimal point (as a decimal only, always preceded by an integer or 0, ie .2 becomes 0.2 and .02 become 0.02)
	-	Hyphen/Dash
	%	Percentage
	+	Plus
	/	Slash

- Do not add unnecessary spaces - 0.5%, not 0.5 %
- Use ‘-’ to designate fractions of a whole where use of decimal system is not possible
  - Preferred = 5.5, but if fraction required then 5-1/2 not 5 1/2 or 51/2
- Medical Device Descriptions should be formatted in the following order:
  - Noun
  - Descriptors in Order of Importance
    1. Application/Use
    2. Trademark or Brand (if applicable)
    3. Dimensions
    4. Refill/Replacement/Substitute
    5. Single Use/Reprocessed/Disposable
    6. Sterile/Non Sterile
    7. Latex Content
    8. Material
    9. Other Attributes
  - Size
  - Color
  - Packaging string down to unit of use when the identifier is associated with a specific package such as in GDSN with the net quantity of the unit of uses
- Descriptions for pharmaceutical items should match First Data Bank label names

- Product descriptions associated with specific packages (such as in GDSN) should include a complete packaging string from the package in question down to the base package or unit of use, whichever is lower. The packaging string should utilize ANSI UoM abbreviations and quantity for each packaging level. For example, the packaging string for a case of 6 boxes of 12 vials of 25 glucose test strips would be:

- CA/6, PK/12, VI/25, 1EA NET QTY 1800

The base unit or unit of use (lowest level) should be specified, not assumed. EA (for each) should be used when ANSI does not have an abbreviation as in the example “test strip”.

If there is standard unit of use or dosage for a product packaged in a bulk multiple unit of use or multi-dose container (ie a multi-dose vial of a pharmaceutical), the net quantity in the description should reflect the total discrete quantity and the number of units or use or doses as well as the standard dose. If the unit of use or dosage is not standard, the description should indicate where the usage/dosage information can be found. For example, the packaging string for a case of 10 boxes of 6 5ml vials of flu vaccine with a standard dose of 0.5 ml would be:

- CA/10, PK/6, VI/5ml NET QTY 300ml = 600 doses of 0.5ml

An injectable pharmaceutical in the same packaging configuration with variable dosing, for instance based on patient weight, would have the following packaging string:

- CA/10, PK/6, VI/5ml NET QTY 300ml see package insert for dosage information

**Note:** Data publishers should recognize that many healthcare providers utilize both a long description and a “short description” limited to 30 characters. The Joint Commission requires that a hospital ensure the standardized use of approved symbol and abbreviations across the hospital. As there is no industry standard list of approved abbreviations, this can prove challenging for a healthcare provider dealing with hundreds - if not a thousand or more - suppliers potentially utilizing differing abbreviation protocols. Unless or until the industry can develop comprehensive abbreviation standards, it is more practical for data publishers to provide complete unabbreviated descriptions and have data recipients develop short descriptions when needed based on their protocols.

Data publishers should recognize that some healthcare provider’s data utilize clinical descriptions for some products. Data providers may want to provide a clinical description for products where such a description might provide additional benefit. Guidelines for clinical descriptions are out of scope for this work group. If they are provided, the GDSN attribute ‘additionalTradeItemDescription’ should be used.

### 3.1.4 Global Product Category (gpcCategoryCode)

**The code used to group products based on their essential properties and characteristics according to the GS1 Global Product Classification (GPC).**

- 8-digit field
- GS1 provides a four-tier hierarchy for product classification, which is currently not commonly used in US Healthcare. However, a GPC code is required for GTIN registration and verification. Healthcare manufacturers should, at a minimum, utilize either 10005844 (medical devices) or 10005845 (drugs). The complete list of GPC codes for healthcare can be found online at [GS1 GPC Standards](#).

### 3.1.5 Net Content and Unit of Measure (netContent and CodeListTransactionalMeasurementUnitCode)

**The quantity (or quantities) of the product contained in the package along with its unit of measure typically printed on the label for the country or market where the product is sold.**

**Net Content Principles** – It is important to recognize that within the healthcare industry product information is utilized beyond the supply chain and that product information is potentially tracked to individual patients, included in patient records, and used for product recalls as well as product safety, effectiveness, and outcomes studies. Accordingly, net content, unit of measure (UoM), and complete packaging hierarchy information regarding medical products and pharmaceuticals are very important to healthcare providers for both supply chain and clinical purposes. These attributes are important to their understanding of the quantity of unit of use items in a specific package, as well as within an order, for allocating supply costs to clinical procedures and patient care episodes, planning efficient order quantity options, ensuring patient safety, and understanding potential waste for products distributed with a unit of use quantity greater than one. As such, net content, UoM, and packaging hierarchy are valuable inputs in getting the right product to the right patient at the right time.

These recommendations are intended to provide guidelines that will help lead to consistency in communication and the ease of understanding of the packaging and net content information for both suppliers and providers while complying with regulatory requirements. That, in turn, should result in greater efficiencies, fewer errors, and lower costs for all parties. While there is significant variability in how different systems manage and store net content and packaging information, the objective is to communicate within industry as simply as possible the actual number of devices or amount of usable product within any particular package and the packaging hierarchy/family (children and/or parents) associated with that product. To this end, we recommend that suppliers include a complete packaging string and net quantity as the last component of each package's long description (see "Product Description" best practice recommendation above).

- Within GDSN Net Content and UoM are two separate attributes, Net Content is a numeric value and UoM a code value from GS1 GDSN Code List Document (Mar 2020). Data publishers must populate both attributes within GDSN.
- Net Content and Unit of Measure should be populated beginning with the base package (GDSN)/Primary DI# (FDA GUDID). This is the lowest level package intended for resale or distribution in GDSN and has a full UDI for the GUDID. The net content of any package should reflect the total number of units of use in that package.

**GDSN allows for multiple net content & UOM for trade items. In cases where a trade item is packaged in bulk quantities and the unit of use or dosage is known and fixed, it is recommended that both net quantity measures be populated. See below for some common examples.**

#### Net Content Examples:

- Glucose Strips - Case of 6 boxes of 12 vials of 25 glucose test strips: Net Content of vial = 25EA,  
Net Content of box = 300EA, Net Content of case = 1800EA
- Exam Gloves - 100 box, 12 boxes per case: Net content of box = 100EA, Net content of case = 1200EA
- Surgical Gloves - Sterile Disposable Pairs, 200 pairs/case: Net content of case = 200PR

- Aspirin - Case of 12 bottles of 250 325mg: Net content of bottle = 250EA, Net content of case = 3000EA
- Flu Vaccine - Case of 10 boxes of 6 5.0 ml vials of flu vaccine with a standard dose of 0.5 ml: Net Content of vial = 5ml or 10 doses of 0.5ml, Net Content of pack = 30ml or 60 doses of 0.5ml, Net Content of case = 300ml or 600 doses of 0.5ml

**Note:** The FDA's GUDID utilizes a different methodology to manage package quantity information. This consists of "Device Count" which is the number of medical devices in the base package and "Quantity per Package" which is the **number of packages with the same Primary DI or Package DI within a given packaging configuration**. If the "Device Count" for the base package is greater than one, the FDA requires a 'Unit of Use DI Number' which is "An identifier assigned to an individual medical device when a UDI is not labeled on the individual device at the level of its unit of use (UoU). Amongst other uses, UoU DIs are used to associate device utilization with patients. UoU is a term not commonly used outside of healthcare. GS1 has created an attribute 'uDIDDeviceCount' to store the GUDID Device Count attribute associated with the base package/primary DI. When the 'uDIDDeviceCount is > 1, GSDN requires implementation of "component attribution" to communicate information about parts of a trade item. Each component of the trade item is assigned a componentNumber. A base unit containing more than one UoU of the same device would have just one component and the componentIdentification would be populated with the unit of use DI (virtual GTIN) for the GUDID. This component attribution approach is also used to handle similar situations such as Single Dose or Level Below the Each.

**Mapping - Blood Glucose Test Strips, vial of 25, box of 12 vials, case of 6 boxes - 1800 strips**

DI (GTIN)	Description	Package	Net Content	UoM	Packaging String
30614141000037	Test Strip Blood Glucose	EA	1	EA	
00614140000036	Test Strip Blood Glucose: V1/25	VI	25	EA	V1/25,1/EA NET QTY 25

'componentIdentification' Unit of Use (virtual) GTIN

Packaging Level	CASE	PACK OR INNER PACK	BASE UNIT OR EACH
Product Name	Blood glucose test strips	Blood glucose test strips	Blood glucose test strips
Global Trade Item Number	20614141000030	10614141000033	00614141000036
Device Count	N/A	N/A	25
Ched GTIN	10614141000033	00614141000036	N/A
Quantity of Next Lower Level Trade Item	6	12	N/A
Unit of Use DI	N/A	N/A	30614141000037

**Note:** This document contains multiple code sets which are updated frequently. The code list that is traditionally used for trade item etc. UoMs is MeasurementUnitCode\_GDSN. Also, UoM is not specifically listed but is shown as 'CodeListTransactionalMeasurementUnitCode'. Within Healthcare, it is recommended that data publishers utilize the ANSI X12 Standards for the actual UoM and UoM abbreviations. Unfortunately, the GS1 'CodeListTransactionalMeasurementUnitCode' does not map 100% to the ANSI X12 standard. Data publishers may come across a situation where the ANSI measurement does not have an exact match in the code list. If that situation occurs, we recommend that the data publisher consult with their GS1-certified data pool on how to address that particular situation.

### 3.1.6 Target Market/Country of Sale (targetMarketCountryCode)

The code representing the country where the physical or non-physical product is intended to be sold.

- The 3-digit code of ISO 3166-1, International Standard for country codes and codes for their subdivisions, is used within GDSN to indicate countries, dependencies, and other areas; or one of the following GS1 additional country codes such as:
  - 001 - World or Global Market
  - 097 - European Union
  - US – United States
  - FR - France
  - D\_A – Development Assistance
  - NON\_EU – Non European Countries

### 3.2 Attributes for Procurement & Payment

In addition to the attributes in Section 3.1, the following attributes have been deemed required by healthcare trading partners to support Procurement and Payment.

#### 3.2.1 Unit Descriptor (TradeItemUnitDescriptorCode)

The code that describes the product's packaging level.

- The GDSN attribute tradeItemUnitDescriptor is chosen from a GS1 maintained code list of seven values used to describe the GTIN hierarchy level. Hierarchy is used to establish a link between different levels of a product logistical chain.
- This hierarchy has its roots in the grocery and retail industries in which terms “each” and “base unit” are often used interchangeably. As such, the BASE\_UNIT\_OR EACH historically denotes the lowest traded package level. This level might contain more than one single unit/unit of use. In healthcare, the industry is working to be able to track products below this hierarchical level to the individual patient record. Accordingly, the GS1 Healthcare GTIN Allocation Rules Standard recommends that “for medical devices, there is only a single level of a product below the lowest packaged level to ensure accuracy in the supply chain and ensure traceability”. The data quality workgroup extends this recommendation to pharmaceuticals and also recommends that if the unit of use is marked with an identifier (whether human or machine readable or both), it should be considered the base unit.
- Note, however, the workgroup does not advise changing existing hierarchies to meet this recommendation if that would trigger a requirement to create new GTINs, which would cause a different set of supply chain challenges. This recommendation should be used for new products and when another circumstance results in changes to the hierarchy or GTINs.

Code Value	Name	Definition	Change Date	Version	Status
BASE_UNIT_OR_EACH	Base Unit or Each	The lowest level of the item hierarchy intended or labeled for individual resale.		1	CURRENT
CASE	Case	A standard trade item shipping unit that contains a single or multiple GTINs. Includes an ½ or ¼ pallet and an ½ or ¼ box pallet.		1	CURRENT
DISPLAY_SHIPPER	Display Shipper	A display, a shipper. May have a “PL” parent. May have (CA or EA) children in multiple instances. It may be Orderable and can be a Consumer Unit.		1	CURRENT
MIXED_MODULE	Mixed Module	A unit load that is a “display ready pallet” that may contain a single GTIN or several unique GTINs that is intended to go directly to the selling floor		1	CURRENT
PACK_OR_INNER_PACK	Pack or Inner Pack	A logistical unit between case and each. This may be a consumable innerpack (i.e. Carton of Cigarettes) or it may be simply a logistical pack (i.e. Dozes of toothbrushes).		1	CURRENT
PALLET	Pallet	A unit load that contains a single or multiple GTINs Includes box pallet		1	CURRENT
TRANSPORT_LOAD	Transport Load	Trade item above the pallet level used for transporting trade items. For example truck load, container, rail car, ship, etc.		1	CURRENT

 **Note:** When the product hierarchy includes a pallet as an orderable unit, additional data elements may be required to be shared with trading partners.

### 3.2.2 Name of Information Provider (partyName [info provider])

The name of the party providing the product information.

- 1 to 35 character text field
- This field is to contain the name of the entity publishing the information.

### 3.2.3 Global Location Number of Information Provider (gln [info provider])

The Global Location Number (GLN) used to uniquely identify the party providing the product information.

- 13 digits
- This field is to contain the GLN of the entity publishing the information.

### 3.2.4 Orderable Unit Indicator (isTradeItemAnOrderableUnit)

The indicator that specifies that the information provider considers the product can be ordered.

- This is a Boolean True/False response dependent upon the publisher and recipient.

Example: A manufacturer who does not sell direct to providers would respond True for a distributor but False to the provider/end user. The distributor publishing to providers would respond True for package sizes the providers could order from the distributor.

### 3.2.5 Base Unit Indicator (isTradeItemABaseUnit)

The indicator that specifies this product does not contain another intended sellable unit. (NOTE: for healthcare products there could be a level below this base unit. See "Unit of Use")

- Boolean True/False
- Conceptually, the base item should be thought of as the lowest level of packaging intended for sale or distribution, *including internal distribution at the provider level*.
- GDSN – An indicator identifying the trade item as the base unit level of the trade item hierarchy
- GUDID - An identifier that is the main (primary) lookup for a medical device and meets the requirements to uniquely identify a device through its distribution and use. The Primary DI would be located on the base package, which is the lowest level of a medical device containing a full UDI. For medical devices without packaging, the Primary DI number and full UDI may be on the device itself.

### 3.2.6 Additional Product Identification Code (AdditionalTradeItemIdentificationTypeCode)

The code indicating the type of Additional Product Identification used.

- Conceptually, the additional trade item identification is the Catalog number or the Model number of the product for medical devices. It should be the NDC in 10-digit format for pharmaceuticals.
- GS1 Code List: For medical devices use "SUPPLIER\_ASSIGNED" when publishing Catalog Number. Catalog Number is preferred; however, if not available, use "MODEL\_NUMBER" and publish Model Number in "additionalTradeItemIdentificationValue".
- For pharmaceuticals, the code is always the value FDA\_NDC\_10.

### 3.2.7 Additional Product Identifier (additionalTradeItemIdentificationValue)

**An identifier, other than the GTIN, which provides an additional identification for the product.**

- For medical devices, if "additionalTradeItemIdentificationCode" is SUPPLIER\_ASSIGNED" then, "additionalTradeItemIdentificationValue" would equal Catalog #.
- If "additionalTradeItemIdentificationCode" is "MODEL\_NUMBER" then, "additionalTradeItemIdentificationValue" would equal Model #.
- Catalog # is preferred and should be populated as the same number as the data source has in their system.
- For pharmaceuticals, the value should be the NDC in 10-digit format.

### 3.2.8 Manufacturer Name (party name [manufacturer name])

**The name of the manufacturer.**

- 1 to 35 character text field
- Manufacturer Name may or may not be the same as the Name of Information Provider. In instances where the Brand Owner controls a third-party manufacturer relationship, the Manufacturer Name may be the same as Brand Owner Name.

**Note:** Some regulations outside of US may impact this. Our scope is US.

### 3.2.9 Manufacturer GLN (gln [manufacturer])

**The Global Location Number (GLN) that uniquely identifies the party who owns the manufacturing process of the product.**

- 13-digit number
- This GLN should correspond to the entity named as Manufacturer.

### 3.2.10 Functional Name (functionalName)

**Describes use of the product or service by the consumer. Should help clarify the product classification associated with the GTIN. Allows for the representation of the same value in different languages but not for multiple values.**

**Note:** If the GPC code for "Medical Device" or "Pharma" is provided, then Functional Name is not GDSN Mandatory.

- There is a validation rule requiring that functionalName not be empty and many data consumers and downstream systems expect a value in this field. Therefore, we recommend that information providers include a simple noun descriptor such as syringe, bone screw, or glove in this field regardless of the GPC code. For pharmaceuticals, use the regulated product name.
- In food, this attribute will typically be used to communicate the 'commodity' (product family), such as 'oranges', 'grapes', 'chicken', 'beef', etc.

### 3.2.11 Number of Different Products (quantityOfChildren)

**The number of different products, each with a unique GTIN, within this item.**

- Value indicates the number of unique next lower-level trade items contained in a complex trade item. A complex trade item contains at least two different GTINs.
- In the example of a case of 6 boxes of 12 vials of 25 glucose test strips, the quantity of children in all examples is 1 as each package contains only unique children. However, in the example of a OR Procedure Kit, the "quantity of children" would be the number of unique components of the kit.

### 3.2.12 Total Count of All Products (totalQuantityOfNextLowerLevelTradeItem)

**This represents the Total quantity of next lower-level trade items that this trade item contains NOTE: Only applies if trade item contains unique GTIN(s) such as a kit containing multiple items.**

- This represents the total quantity of all next lower level trade items that this trade item contains. This could be a case of a single product, a multi-pack, a pallet of cases of a single product, and/or a pallet of different products (different cases). The information is used by a buyer and/or consumer to understand what type of product they are receiving; also used for inventory/warehouse management. For example, a First Aid Kit First consisting of 1 pair of scissors, 2 rolls of tape, and 3 packs of bandages would have a quantityOfChildren of 3 (scissors, tape and bandages) and a totalQuantityOfNextLowerLevelTradeItem of 6 (1+2+3).

### 3.2.13 Child Trade Item (tradeItemIdentificationOfNextLowerLevelTradeItem [GTIN])

**The GTIN of the trade item in the item hierarchy level immediately below the trade item in question.**

- Only applies if answer to "Is Trade Item a Base Unit?" = NO
- Implicitly, this would also not apply to a Unit of Use GTIN.

### 3.2.14 Count of Each Specific Product (quantityOfNextLowerLevelTradeItem)

The count of each specific product within this item. This represents the Total quantity of each of the unique next lower level trade items that this trade item contains. NOTE: Applies if a value is provided for "Next Lower Level GTIN"

- The quantity of each child trade item contained by the parent trade item. The child trade item must be in the hierarchy level immediately below the parent trade item. If the parent trade item contains more than one GTIN children, then each of those children will have its own 'quantityOfNextLowerLevelTradeItem'. For example, a First Aid Kit First consisting of 1 pair of scissors, 2 rolls of tape, and 3 packs of bandages would have a value of 1 for the scissors, 2 for the tape, and 3 for bandages.

### 3.3 Attributes for EPCIS for Drug Supply Chain Security Act

In addition to the attributes in section 3.1 and 3.2, the following attributes have been deemed required by healthcare stakeholders to support EPCIS for the Drug Supply Chain Security Act (DSCSA). These attributes successfully supported the use of EPCIS for traceability of pharmaceutical products in a proof of concept exercise conducted by pharmaceutical supply chain stakeholders.

#### 3.3.1 Consumer Unit Indicator (isTradeItemConsumerUnit)

**The indicator that specifies the product can be purchased or, in some trade channels (e.g., food service, healthcare), used by the consumer.**

- Boolean True/False
- Identifies whether the trade item is to be taken possession of, or to be consumed or used by, an end user or both, as determined by the manufacturer. The end user could be, but is not limited to, a consumer as in items sold at retail, or a patient/clinician/technician in a healthcare setting, or an operator for foodservice such as restaurants, airlines, cafeterias, etc.

#### 3.3.2 Invoice Unit Indicator (isTradeItemAnInvoiceUnit)

**The indicator identifying that the information provider considers the trade item as an invoiceable unit.**

- Boolean True/False
- An indicator identifying that the information provider will include this trade item on their billing or invoice. This may be relationship dependent based on channel of trade or other point to point agreement.

#### 3.3.3 Shipping Unit Indicator (isTradeItemA DispatchUnit)

**The indicator identifying that the information provider considers the trade item as a shipping unit.**

- Boolean True/False
- An indicator identifying that the information provider considers the trade item as a dispatch (shipping) unit. This may be relationship dependent based on channel of trade or other point to point agreement.

#### 3.3.4 Variable Measure Indicator (isTradeItemA VariableUnit)

**The indicator that specifies the product content is variable (ie not a fixed quantity).**

- Boolean True/False
- Indicates that an article is not a fixed quantity, but that the quantity is variable. Can be weight, length, volume, trade item is used or traded in continuous rather than discrete quantities

### 3.3.5 Effective Date (effectiveDateTime)

**The date/time when the product information becomes effective.**

- This is the date and time at which the associated product information becomes effective. Used by the data recipient to determine the date/time when the product information should be applied in their system. Data recipients should not apply the product information prior to the effective date and time.
- Check with data pool regarding preferred format

### 3.3.6 End Availability Date Time (endAvailabilityDateTime)

**The date/time when the product is no longer available for order from the information provider/seller.**

- The date from which the trade item is no longer available from the information provider
- Check with data pool regarding preferred format
- If there is no end date, this field can be left blank. It is expected that for pharmaceutical products this field will not be left blank. To avoid confusion for products that have no end date, it is recommended the data publisher use 12/31/9999 so that the data recipient knows affirmatively that the end availability date is indefinite, and the field was not inadvertently left blank.

### 3.3.7 Dosage Form Type (dosageFormType)

**The code that provides a description of the physical form of a medication or dietary supplement.**

- Intended to represent the physical form of a medication. Data publishers should utilize the 'dosageFormTypeCodeReference' populated with the FDA code from the FDA Dosage Forms code table at: <https://www.fda.gov/industry/structured-product-labeling-resources/dosage-forms>
- Data publishers should consult with their data publishers and refer to the Pharmaceutical Information Module of the most recent [GDSN Trade Item Module Library Business Message Standard](#) to assure data recipients can display the SPL term (AEROSOL, CAPSULE, GEL, PILL, TABLET...) associated with the code.
- Additional information regarding use of GS1 Standards and the DSCSA may be found in [Implementation Guideline: Applying GS1 Standards for DSCSA and Traceability Release 1.2](#)

### 3.3.8 Ingredient Strength (ingredientStrength)

Used to define the strength of each ingredient in a trade item or unit volume of non-food and beverage the trade items.

- Intended to define strength of each ingredient in a trade item or unit volume of non-food and beverage the trade items. The objective for pharmaceuticals is to communicate the strength or potency of the product including the unit of measure (for example, 60 mg, 25 ml). This should match the regulatory filing for the product.
- [Pharmaceutical Serialization and Traceability Use Case - Enable the sharing of pharmaceutical product information via the GDSN Release 1](#) specifies that the GDSN attribute 'ingredientStrength' be used to define the strength of each ingredient in a trade item or unit volume of non-food and beverage items.
- Data publishers should refer to the Nonfood Ingredient Module of the most recent [GDSN Trade Item Module Library Business Message Standard](#) and consult with their data pool on populating the appropriate attributes.

### 3.3.9 Data Carrier Type Code (DataCarrierTypeCode)

A code indicating the type of data carrier physically present on the trade item. **NOTE: In US for pharmaceuticals, this is defined by regulation to be 2D DataMatrix. This attribute is therefore assumed for US target market but required for O-US.**

- Identifies the barcode marked on the product or package; For example, linear versus DataMatrix.
- Codes can be found on the current [GDSN and Shared Code List](#).
- For Pharma, a GS1 DataMatrix is expected, "GS1\_DATA\_MATRIX"
- For Med Devices, the data publisher should consult [GS1 US Healthcare Implementation Guide: Applying the GS1 System of Standards for U.S. FDA Unique Device Identification](#) Part 4 and the decision tree in Section 2.3.1-1.

### 3.3.10 Serial Number Location (SerialNumberLocationCode)

The location on the item or packaging of a serial number. A serial number is a code, numeric, or alphanumeric assigned to an individual instance of an entity for its lifetime.

- Identifies if the label or barcode includes a serial number.
- Codes can be found on the current [GDSN and Shared Code List](#).
- Multiple codes are allowed if the serial number is marked in more than one location.

MARKED_ON_PACKAGING
MARKED_ON_PACKAGING_INSERT
MARKED_ON_TRADE_ITEM
NOT_MARKED
UNKNOWN

### 3.3.11 Has Batch Number (hasBatchNumber)

The indicator specifying whether the item has a batch or lot number.

- Boolean True/False
- Indicates if the label or the barcode includes Batch or Lot number

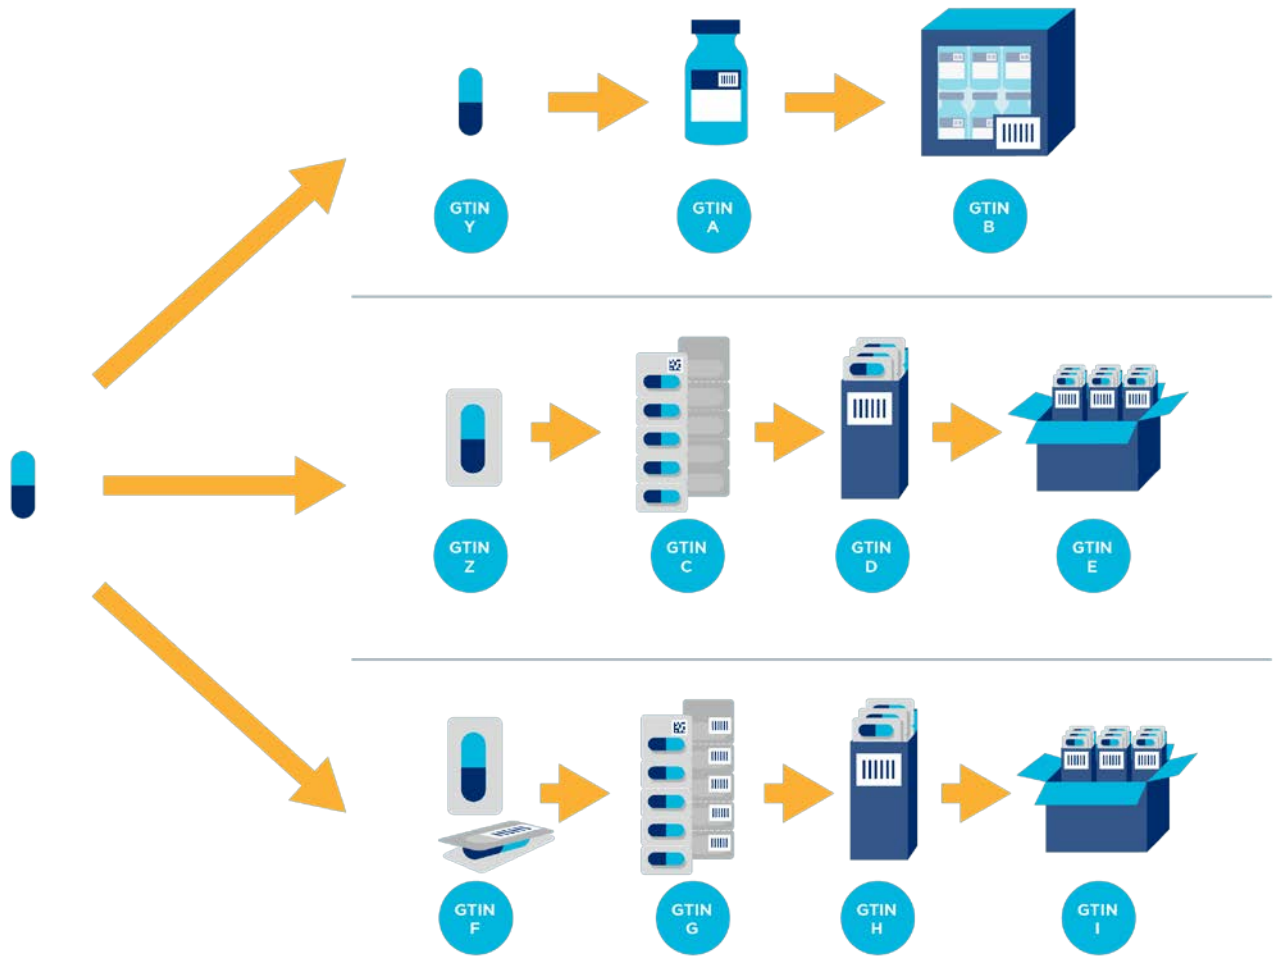

### 3.3.12 Trade Item Date on Packaging Type Code (tradeItemDateOnPackagingTypeCode)

The code indicating the type of date on the package to the buyer and consumer.

- Indicates if the label or barcode includes an *expiry date*
- Codes can be found on the current [GDSN and Shared Code List](#)
- For Pharma in US for DSCSA, "EXPIRATION\_DATE" is expected

BAKED_FOR_DATE
BAKED_ON_DATE

### 3.4 Attributes for Point of Care Scanning

In addition to the attributes in section 3.1, 3.2, and 3.3, the following attributes have been deemed required by healthcare stakeholders to support point of care scanning in the patient care environment.

#### 3.4.1 Quantity of Inner pack (quantityOfInnerPack)

 **Note:** ‘quantityOfInnerPack’ and the next attribute, ‘quantityOfNextLevelTradeItemWithinInnerPack’ were added as vital attributes by the POC workgroup in order to assure that providers would be able to calculate the number of units of use (UoU) in packages below the GDSN base level. Since that time, GS1 has clarified UoU within the [GS1 Healthcare GTIN Allocation Rules](#) inclusive of a recommendation that medical devices not have more than one level below base. That along with this work group’s proposed recommendation that all trade item descriptions include a packaging string along with the net quantity of UoU may obviate the need to use these two attributes unless the trade item is an exception and has more than two levels below base. The workgroup members chose to include the attributes in this best practice guide to support the rare circumstances when a device might include more than one level below the each.

 **Note:** None of the examples used in this document include values for these attributes.

- ‘quantityOfInnerPack’ Use this for Unit Quantity if lower-level packaging exists with no GTIN (Indicates the number of non-GTIN assigned inner-packs of next lower-level trade items within the current GTIN level). This attribute should be used only if a product indeed has more than two levels below base. This situation should be avoided by manufacturers as recommended in the [GS1 Healthcare GTIN Allocation Rules](#) “It is recommended for medical devices that there is only a single level of a product below the lowest packaged level to ensure accuracy in supply chain and ensure traceability”
- If used, ‘quantityOfInnerPack’ indicates the number of non-GTIN assigned inner-packs of next lower-level trade items within the current package. Along with ‘quantityOfNextLevelTradeItemWithinInnerPack’ this will allow data consumers to understand the actual number of units of use within the package.

#### 3.4.2 Quantity of Next-Level Trade Item within Inner Pack (quantityOfNextLevelTradeItemWithinInnerPack)

- ‘quantityOfNextLevelTradeItemWithinInnerPack’ indicates the number of next lower-level trade items contained within the physical non-GTIN assigned each or inner-packs (inner-pack). This attribute should only be used if the item hierarchy has more than one level below base and ‘quantityOfInnerPack’ has been populated.

### 3.5 Other Attributes Recommended for Healthcare

The following list of attributes represent those deemed to be helpful by at least one healthcare supply chain trading partner in executing basic processes.

For example, package measurements aren't required in order to requisition product from a manufacturer but, for facilities with limited storage space, this information is very useful when making the procurement decision in order to know how much product can be safely stored in the space available.

#### 3.5.1 Depth and UOM (depth & MeasurementUnitCode\_GDSN)

**The depth or length measurement, with its unit of measure, of the item (such as product, case, pallet) according to the GS1 Package Measurement Rules.**

- Use the GDSN attribute 'depth' to represent the depth of the trade item as measured according to the [GDSN Package Measurement Rules](#).
- Within GDSN, 'depth' and the depth UoM are two separate attributes, the former being a value and the latter a code value from GS1 GDSN Code List Document (Mar 2020). Note that this document contains multiple code sets and is updated frequently. Also, UoM is not specifically listed but is shown as 'MeasurementUnitCode\_GDSN'.

#### 3.5.2 Height and UOM (height & MeasurementUnitCode\_GDSN)

**The vertical measurement, with its unit of measure, of the item (such as product, case, pallet) according to the GS1 Package Measurement Rules.**

- Use the GDSN attribute 'height' to represent the height of the trade item as measured according to the [GDSN Package Measurement Rules](#).
- Within GDSN, 'height' and the height UoM are two separate attributes the former being a value and the latter a code value from GS1 GDSN Code List Document (Mar 2020). Note that this document contains multiple code sets and is updated frequently. Also, UoM is not specifically listed but is shown as 'MeasurementUnitCode\_GDSN'.

#### 3.5.3 Width and UOM (width & MeasurementUnitCode\_GDSN)

**The horizontal measurement, with its unit of measure, of the item (such as product, case, pallet) according to the GS1 Package Measurement Rules.**

- Use the GDSN attribute 'width' to represent the width of the trade item as measured according to the [GDSN Package Measurement Rules](#).
- Within GDSN, 'width' and the width UoM are two separate attributes the former being a value and the latter a code value from GS1 GDSN Code List Document (Mar 2020). Note that this document

contains multiple code sets and is updated frequently. Also, UoM is not specifically listed but is shown as 'MeasurementUnitCode\_GDSN'.

### 3.5.4 Gross Weight and UOM (gross weight & MeasurementUnitCode\_GDSN)

**The total weight of the product including the weight of all its packaging materials.**

- Use the GDSN attribute 'grossWeight' to identify the gross weight of the trade item. The gross weight includes all packaging materials of the trade item. At pallet level, the gross weight includes the weight of the pallet itself.
- Within GDSN, 'grossWeight' and the gross weight width UoM are two separate attributes the former being a value and the latter a code value from GS1 GDSN Code List Document (Mar 2020). Note that this document contains multiple code sets and is updated frequently. Also, UoM is not specifically listed but is shown as 'MeasurementUnitCode\_GDSN'.

### 3.5.5 Additional Classification Agency Name (additionalTradeItemClassificationSystemCode)

**A code value from 'AdditionalTradeItemClassificationCodeListCode' on the GS1 GDSN Code List Document used to declare the type of the additional product classification that allows a buyer to know which classification system is used.**

- For Healthcare, it is recommended to use UNSPSC, or 5.
- Note that the Code List document contains multiple code sets and is updated frequently.

### 3.5.6 Additional Classification Category Code (additionalTradeItemClassificationCodeValue)

**The actual code value for the classification system identified by additionalTradeItemClassificationCodeValue.**

- For 'additionalClassificationCategoryCode' use the actual eight-digit code for the trade item from the UNSPSC code set, including at a minimum the segment, family, and class portions with the commodity portion also preferred.
- It is recommended that data publishers also populate and publish 'additionalClassificationCategoryCodeVersion' identifying the particular release of UNSPSC from which the classification code originates.

### 3.5.7 Packaging Type Code (packagingTypeCode)

**The code for the type of package or container of the product; The dominant means used to transport, store, handle, or display the trade item as defined by the data source. This packaging is not used to describe any manufacturing process.**

- The use of this attribute has been recommended for both OTC/P2P and for point of care data capture. 'packageTypeCode' is a code from the US [GDSN Code List "PackageTypeCode\\_GDSN"](#) representing

the dominant means used to transport, store, handle, or display the trade item as defined by the data source.

### 3.5.8 Publication Date (`publicationDateTime`)

**The attribute 'publicationDateTime' is recommended for DSCSA for EPCIS. This is the date on which all static data associated with the trade item becomes available for viewing and synchronization.**

- Data publishers should consult with their data pool regarding format.

### 3.5.9 Established Name (`regulatedProductName`)

**The prescribed, regulated, or generic product name provided by the seller in adherence with laws, regulations, or administrative provisions applicable in the country. Not all products have a regulated name.**

- For pharmaceuticals, use the GS1 attribute 'regulatedProductName' representing the prescribed, regulated, or generic product name or denomination that describes the true nature of the item and is sufficiently precise to distinguish it from other products according to country specific regulation. In the US, use the designated FDA Official name, the Compendial name, the USAN Council name, or the common or usual name (section 502(e)(3) of the Act and 21 CFR 299.4). Ordinarily, the established name of a drug will be the compendial name. However, FDA may designate an established name in cases where a monograph does not exist.

### 3.5.10 Start Availability Date Time (`startAvailabilityDateTime`)

**The date/time when the product can first be sold to or ordered by the consumer.**

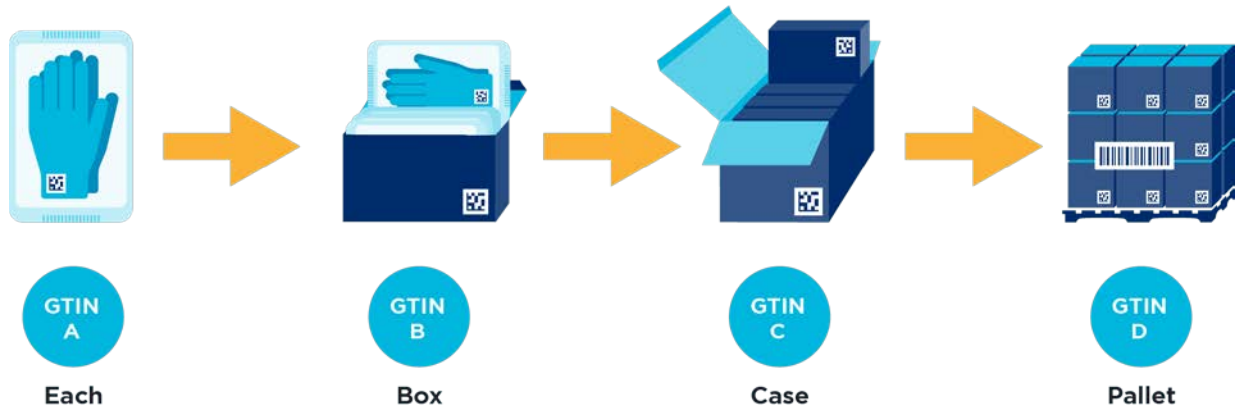

- Recommended for pharmaceutical items: use the attribute 'startAvailabilityDateTime' representing the date and time (CCYY-MM-DDTHH:MM:SS) from which the trade item becomes available from the supplier, including seasonal or temporary trade item and services.
- Data publishers should consult with their data pool regarding format.

### 3.5.11 Trade Item Status (GDSN Mandatory; a 'command' to be added by Data Pool)

**In GDSN, this is not a true attribute but a 'command' typically added by the Data Source's Data Pool. In cases where it is not, the data source must populate this command field. Trade Item Status indicates if the trade item has been added for the first time (ADD), deleted (DELETE), corrected (CORRECT), or replaced (CHANGE\_BY\_REFRESH) by the information provider.**

- GUDID has specific rules about how and when items and attributes are to be added, changed, or deleted.
- In general, the data provider should communicate the record status utilizing the methodology associated with the data transmission or synchronization methodology employed.

### 3.6 Other Attributes Required for GUDID

The following list of attributes, in addition to several in the preceding sections, are also required data elements for medical devices being listed in the U.S. FDA GUDID. For details on these attributes and how to provide this information, please reference the U.S. FDA Guidance document:

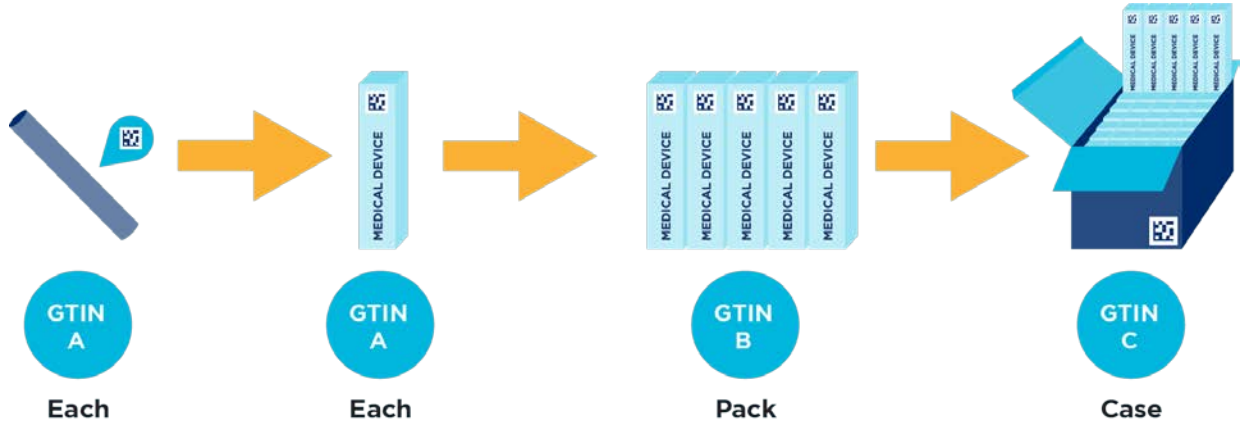

<https://www.fda.gov/medical-devices/global-unique-device-identification-database-gudid/gudid-guidance>

- Issuing Agency
- FDA GMDN PT Code
- Latex Content
- For Single Use Y/N
- Record Publish Date
- Labeler DUNs Number
- Serial # Y/N
- Expiration Date Y/N
- Donation ID Y/N
- MRI Safety
- Device packaged as sterile Y/N
- Device requires sterilization prior to use Y/N

## Proprietary Statement

This document contains proprietary information of GS1 US. Such proprietary information may not be changed for use with any other parties for any other purpose without the expressed written permission of GS1 US.

## Improvements

Improvements and changes are periodically made to publications by GS1 US. All material is subject to change without notice. Please refer to GS1 US website for the most current publication available.

## Disclaimer

Except as may be otherwise indicated in specific documents within this publication, you are authorized to view documents within this publication, subject to the following:

1. You agree to retain all copyright and other proprietary notices on every copy you make.
2. Some documents may contain other proprietary notices and copyright information relating to that document. You agree that GS1 US has not conferred by implication, estoppels, or otherwise any license or right under any patent, trademark, or copyright (except as expressly provided above) of GS1 US or of any third party.

This publication is provided "as is" without warranty of any kind, either express or implied, including, but not limited to, the implied warranties of merchantability, fitness for a particular purpose, or non-infringement. Any GS1 US publication may include technical inaccuracies or typographical errors. GS1 US assumes no responsibility for and disclaims all liability for any errors or omissions in this publication or in other documents which are referred to within or linked to this publication. Some jurisdictions do not allow the exclusion of implied warranties, so the above exclusion may not apply to you.

Several products and company names mentioned herein may be trademarks and/or registered trademarks of their respective companies. GS1 US does not, by promulgating this document on behalf of the parties involved in the creation of this document, represent that any methods, products, and/or systems discussed or recommended in the document do not violate the intellectual property rights of any third party. GS1 US has not performed a search to determine what intellectual property may be infringed by an implementation of any strategies or suggestions included in this document. GS1 US hereby disclaims any liability for any party's infringement of intellectual property rights that arise as a result of any implementation of strategies or suggestions included in this document.

This publication may be distributed internationally and may contain references to GS1 US products, programs, and services that have not been announced in your country. These references do not imply that GS1 US intends to announce such products, programs, or services in your country.

GS1 US shall not be liable for any consequential, special, indirect, incidental, liquidated, exemplary, or punitive damages of any kind or nature whatsoever, or any lost income or profits, under any theory of liability, arising out of the use of this publication or any content herein, even if advised of the possibility of such loss or damage or if such loss or damage could have been reasonably foreseen.

GS1 US HEREBY DISCLAIMS, AND YOU HEREBY EXPRESSLY RELEASE GS1 US FROM, ANY AND ALL LIABILITY RELATING TO YOUR COMPLIANCE WITH REGULATORY STANDARDS AND LAWS, INCLUDING ALL RULES AND REGULATIONS PROMULGATED THEREUNDER. GS1 US MAKES NO WARRANTIES OF ANY KIND RELATING TO THE SUITABILITY OF THE GS1 STANDARDS AND THE SPECIFIC DOCUMENTS WITHIN THIS PUBLICATION TO COMPLY WITH ANY REGULATORY STANDARDS, LAWS, RULES AND REGULATIONS. ALL INFORMATION AND SERVICES ARE PROVIDED "AS IS."

\*GS1 US employees are not representatives or agents of the U.S. FDA, and the content of this publication has not been reviewed, approved, or authorized by the U.S. FDA. The following information contained herein is for informational purposes only as a convenience, and is not legal advice or a substitute for legal counsel. GS1 US Inc. assumes no liability for the use or interpretation of the information contained herein.

## No Liability for Consequential Damage

In no event shall GS1 US or anyone else involved in the creation, production, or delivery of the accompanying documentation be liable for any damages whatsoever (including, without limitation, damages for loss of business profits, business interruption, loss of business information, or other loss) arising out of the use of or the results of use of or inability to use such documentation, even if GS1 US has been advised of the possibility of such damages.

## IAPMO

In this publication, the letters "U.P.C." are used solely as an abbreviation for the "Universal Product Code" which is a product identification system. They do not refer to the UPC, which is a federally registered certification mark of the International Association of Plumbing and Mechanical Officials (IAPMO) to certify compliance with a Uniform Plumbing Code as authorized by IAPMO.
